

TS100 TREE SEEDER

FEATURES

- Ground following tyne Parallelogram system
- Independent seed boot
- Adjustable depth tynes and seed boots
- Interchangeable tynes and seed boots
- All drivetrain components, chains and sprockets are fully covered and guarded.
- Infinitely variable gearbox
- Quick adjustment of down pressure via an hydraulic ram
- 2 seed drums with 4 compartments and self emptying design
- One single cover which weather proofs the seed drums, camera, and chains and sprockets
- Heavy duty high quality pivots, pins and bushes
- Adjustable height draw bar
- Roadworthy
- LED lights
- Built in toolbox
- Observation camera to monitor seed drums
- Hydraulic controls are remote controlled
- De-mountable bolt on axles, which are interchangeable with the spare wheel mount, which is also a

de-mountable axle, designed for ease of replacement if required especially in remote conditions

- Poly block coupling
- Designed for rocky harsh environments
- Ability to plant different seed varieties at different seeding rates at the same time

OPTIONS

- The TS 100 Tree Seeder has been designed to be used in harsh environments. It has movement in all directions enabling it to adjust to the conditions whilst eliminating any undue stress being put through the machine. The machine can castor sideways, as well as up and down movement. The tyne and seed boot mechanisms have independent breakout or trip mechanisms, which reduces stress and therefore downtime due to breakdowns.

Robust agricultural innovations
